Subject: Environmental & Recycled Content Statement

Magnuson Group always endeavors to be a good steward of the earth and we partner with suppliers with similar views. Toward that end we specifically:

- Separate our trash and specifically our metal scrap into steel and aluminum for recycling
- We actively pursue energy conservation by leaving lights off in areas not in use, setting the thermostat at 65 degrees in the winter and 74 in the summer.
- Nothing that we manufacture produces a by-product that is hazardous in any way.
- All corrugated packaging contains a minimum of 35% recycled material and does meet or exceeds BIFMA packaging standards (certification attached).
